

UPDATE DOWNLOAD DETAILS

Current Update:	Details:
01-Jan-20 (R4)	<p>Current 2020 base release (Series VIII 10.80.04) – this latest release includes addition of a Service Message feature on the start screen and minor changes to several forms.</p> <p>This current update is mandatory for all copies installed or updated prior to 01-Jan-20.</p> <p>This update will convert old dated/release copies to a new “sunset” version and will eliminate any problems caused by Microsoft’s November 12 Access 2013+ security update (which effectively stopped the SandBagger from operating correctly). All SandBagger updates are cumulative and will include changes up to the posted date and revision level.</p>

SERVICE MESSAGES

Date:	Messages
18-Feb-20	<p>In addition to including a fix to temporarily resolve issues for some users of Access 2007 Runtime, the current update includes changes to several user guides (to reflect current status of the application), and minor changes that have no effect on operation of the application. Other downloads have not included these changes, so users experiencing any problem or wishing to keep the application up to date should install or reinstall the current update.</p>

MICROSOFT CHANGES AFFECTING THE SANDBAGGER

Access 2007	<p>We are very sorry but we have had to deprecate SandBagger installations using the Access 2007 Runtime version previously distributed with the SandBagger – the new complete installation will install Access 2013 Runtime with it. Microsoft support of Access 2007 ended some time ago, and in future, we will not be attempting to use SandBagger updates to keep the SandBagger running with this Access version.</p> <p>While a new or updated SandBagger installation may continue to work with Access 2007 for the immediate future, if you are using that version (full or runtime), Microsoft’s security and feature updates may cause serious problems with it - use at your own risk. If you are using Access 2007 Runtime, we recommend you uninstall it from your computer and download/install the 32 Bit version of Access 2013 Runtime from the Microsoft website. If you are using the full version, consider upgrading your copy to a newer version. If you are getting security warnings after upgrading, please see the SandBagger Application Guide for information about how to fix that.</p>
Windows 7	<p>Microsoft has recently ended support for Windows 7, and to avoid problems with your PC, you should consider taking advantage of upgrading it to a free version of Windows 10 which is still available (details are available at CNET.com). Unfortunately, you will have serious problems with PCs with BIOS older than about five years or with small hard drives, as Windows 10 expects features that are not often available in those older PCs. In that case, you may have better luck upgrading it with a copy of Windows 8.1.</p>
